NAME

csvutils – a set of utilities for managing CSV data

SYNOPSIS

csvcount [OPTION]... [FILE]...
csvcheck [OPTION]... [FILE]...
csvfix [OPTION]... [FILE1] [FILE2]
csvcut [OPTION]... [FILE]...
csvgrep [OPTION]... PATTERN [FILE]...
csvbreak -f FIELD [OPTION]... [FILE]

DESCRIPTION

csvutils provides a set of program for retieving information from, and manipulating, CSV data. The current version includes the following programs, see the man pages for the individual programs for details.

csvcount – print the number of fields and rows in a CSV file
csvcheck – check CSV files for malformed data
csvfix – fix malformed CSV data and change data format
csvcut – print selected fields from CSV files
csvgrep – print selected fields from CSV files
csvbreak – break a CSV file into multiple files based on the specified field

All programs that produce CSV data output only well-formed data regardless of their input and all output fields are quoted.
